[Enabling Graphene Oxide Nanosheets as Water Separation ...](#)

Sun, 04 Mar 2018 08:37:00 GMT

We report a novel procedure to synthesize a new type of water separation membrane using graphene oxide (GO) nanosheets such that water can flow through the nanochannels between GO layers while unwanted solutes are rejected by size exclusion and charge effects. The GO membrane was made via layer-by-layer deposition of GO nanosheets, which were cross-linked by 1,3,5-benzenetricarbonyl ...

2. Applications of Mussel-Inspired Materials 2.1. Surface Coatings and Adhesive Applications. In the past few years, MIMs have attracted substantial interest for various types of biomedical applications, showed successful applications ranging from coatings for interfacing with cells and tissue, to drug delivery and biosensing [11,12].Mussel adhesion is mediated by the mfps, abundant in the ...

We show that nanometer-scale pores in single-layer freestanding graphene can effectively filter NaCl salt from water. Using classical molecular dynamics, we report the desalination performance of such membranes as a function of pore size, chemical functionalization, and applied pressure. Our results indicate that the membrane's ability to prevent the salt passage depends critically on pore ...
